Re: RM-11683, IB Docket No. 12-340

Dear Ms. Dortch:

I wrote to the FCC initially to communicate my support for the efforts of LightSquared to implement a revolutionary new 4G network using both satellite and earth bound equipment. I now write to give my perspective on what others have written.

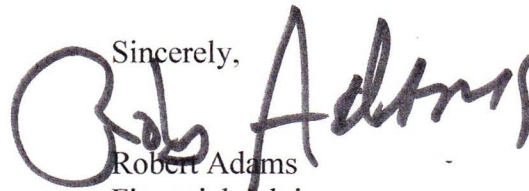

As I told you earlier, I am a financial and retirement planner with many clients in rural areas of Kentucky. In my business, I have developed many excellent clients in rural areas of Kentucky, in places that many investment advisors do not operate. I have learned from this that, in business, one must utilize all of the resources available, and not to overlook any area just because it is rural, or because it has poor cell phone service and wireless broadband access. In most areas in rural Kentucky, good broadband service is almost non-existent.

I find LightSquared's proposal to combine its licensed spectrum with other spectrum utilized by the National Oceanic and Atmospheric Administration a compelling, well-thought out sharing solution that could ultimately foster investment, continue innovation and increase consumer welfare. My comments were echoed by the Computer and Communications Industry Association, which wrote that,

"The days of spectrum abundance and primitive receiver technology are officially over in the 21st century. Allowing neighboring legacy licensees to dictate gross limitations on future use of adjacent frequencies would set very bad spectrum management precedent that could well reduce revenue from upcoming incentive auctions."

I realize that all resources are scarce, as this comment points out. I also realize, as someone who advises businesses and business owners every day in rural Kentucky, just how badly Kentucky needs the type of service that LightSquared will offer. I now ask that the FCC approve LightSquared's pending application for license modification. Thank you.

Sincerely,

Robert Adams
Financial Advisor
